

Mereddy Sai Prakash Reddy *AI Engineer*

✉ 1997.saiprakash@gmail.com ☎ 9502106716  LinkedIn  GitHub  Hugging Face 📍 Hyderabad, India

EDUCATION

Master of Business Administration (MBA) Osmania University Percentage - 67%	2020 – 2022 Hyderabad
--	--------------------------

COURSES

Data Science  Innomatics Research Labs	2024 – 2025 Hyderabad, India
---	---------------------------------

PROFESSIONAL EXPERIENCE

Software Application Engineer Wolverstride	03/2026 – Present
--	-------------------

- Integrating Advanced AI Agents - Deploying sophisticated agents using Qwen 3.5 & 3.6 to automate complex internal workflows, significantly streamlining company-wide operations and reducing manual task latency.
- Scaling Enterprise Platforms - Leading the development of AI-driven features for core platforms, focusing on creating high-performance tools that enhance both system scalability and the end-user experience.
- Autonomous Process Automation - Specializing in the design of autonomous agents capable of handling multi-step business logic, which has minimized human intervention in repetitive data cycles.
- Technical Mentorship - Collaborating with cross-functional teams to define AI roadmaps and ensuring best practices in prompt engineering and model fine-tuning across the engineering department.

Associate Legato Health Technologies LLP	10/2021 – 09/2022 Hyderabad
--	--------------------------------

- Optimized claims processing by analyzing historical data via SQL , identified recurring bottlenecks that improved Auto-Adjudication Rates (AAR) by 12% and significantly reduced manual rework.
- Built and managed interactive Power BI dashboards to track key metrics like PMPM and Medical Loss Ratio, providing the leadership team at Anthem/Elevance with clearer insights into cost and utilization.
- Led data integrity audits using Python to validate provider directories against NCQA standards, ensuring over 98% accuracy and minimizing downstream claim denials.
- Partnered with the Special Investigation Units(SIU) to detect billing anomalies through outlier analysis, helping uncover approximately \$200k in potential overpayments.

SKILLS

Python

- Operators, Data Types, Conditional Statements, Loops, Functions, Object Oriented Programming, File Handling, Exception and Error Handling.

Advance Statistics

- Descriptive Statistics, Probability Distribution, Inferential statistics, Parametric and Non-Parametric tests.

Microsoft Power BI

- Power BI Desktop, Power View, Power Pivot, Power Query Editor, Power BI Service, Relationships, DAX Functions, Joins.

Deep Learning

- NLP,LLM's ,Computer Vision

Exploratory Data Analysis

- Numpy, Pandas, Seaborn, Matplotlib, RegEX.

MySQL

- CRUD Operations,CTE, Clause, Sub-Queries, Triggers, Joins, Views, Window Functions.

Machine Learning

- Supervised Models, Un-Supervised Models, Regularization methods, Evaluation Metrics, Hyper Parameter tuning methods.

 PROJECTS

1.Flux Studio - GenAI | Text-to-Image Application | Live Demo Link

GenAI

- Architected a real-time GenAI pipeline to synthesize 1024x1024 resolution digital assets from text inputs in under 10 seconds.
- Orchestrated a dual-model workflow using Google Gemini 2.5 for automated prompt refinement and Flux.1 via serverless APIs to enable execution on free-tier CPU infrastructure.
- Delivered a production-ready web interface on Hugging Face Spaces that enhances visual detail by ~40% while eliminating expensive GPU hardware dependencies.

2.InsightStream – Multimodal Video RAG System | GitHub Link

Python, LanceDB, Moondream2, OpenCV

- Constructed local Video-RAG system (Moondream2, LanceDB) for 100% private, zero-cost semantic search.
- Engineered automated embedding pipeline, cutting manual video analysis time by 95%.
- Fine-tuned edge CPU inference via multi-threading, ensuring 0% application latency during heavy GenAI tasks.

3.Real - Time Driver Drowsiness & Distraction Detection System | GitHub Link

Computer Vision

- Developed a high-performance computer vision system to prevent road accidents, processing live video data at 30+ FPS on standard CPU hardware.
- Implemented MediaPipe Face Mesh to track 468 facial landmarks, utilizing NumPy to calculate geometric Eye Aspect Ratios (EAR < 0.25) and 3D Head Pose angles via Solve PnP algorithms.
- Achieved sub-second latency (1.5s) for critical alerts and boosted system throughput by 40% using asynchronous multi-threading for non-blocking audio alarms.

4.Crypto Currencies

Exploratory Data Analysis

- Evaluated historical price volatility and trading trends for 400+ cryptocurrencies to identify recurring long-term market patterns.
- Quantified inter-asset correlations via statistical modeling and visualized 15+ interactive charts to map dependencies between Trading Volume and Market Cap.
- Derived a custom Composite Score (Price: 40%, Cap: 30%, Vol: 30%) to rank asset stability, establishing Bitcoin’s 64.4% market dominance.

5.Crop Compatibility Prediction

Python Programming, EDA, Scikit - Learn Library.

- Built and trained a machine learning algorithm to predict crop compatibility based on soil composition and climatic conditions for optimized agricultural planning.
- Prepared data through preprocessing and partitioned it into training and testing sets (80:20 split).
- Constructed and assessed the performance of 7 distinct machine learning models.
- Validated that the Decision Tree algorithm yielded the highest accuracy (99.9%) in predicting crop compatibility.

6.Library Database Analysis

MySQL

- Analyzed circulation data across 3+ library branches to audit inventory distribution and segment borrowers based on active loan volume.
- Architected complex SQL queries joining 4+ relational tables via optimized Joins and Aggregate functions to map inventory lifecycles and track overdue assets.
- Delivered 3 strategic recommendations to calibrate stock allocation and branch performance by uncovering critical trends in borrower engagement and inventory distribution.

7.Adidas Sales Data

Power BI

- Analyzed US sales data to uncover market trends and guide product strategy.
- Designed 10+ interactive Power BI reports to visualize key performance metrics through rigorous data modeling across multiple datasets.
- Identified Charleston (\$15.6M) as the top market and revealed Online sales (50.67%) significantly outperformed physical stores.

 CERTIFICATES

• Data Science with Gen AI 

• Python 

• MySQL 

• Advanced Data Science with Python 

• Power Bi
